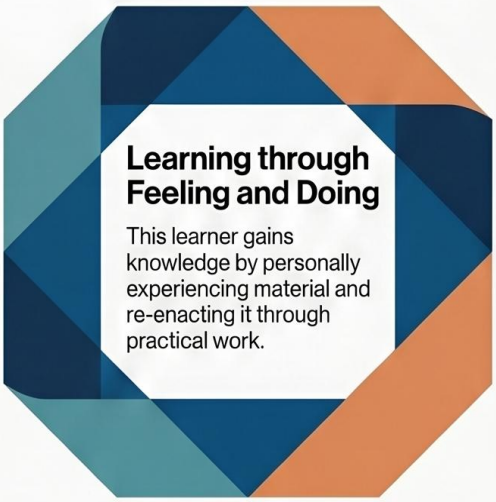
The Doer vs. The Watcher:
Understanding CE and RO Learning Styles

According to David A. Kolb's model, people acquire knowledge through different preferred styles. This infographic focuses on the contrast between those who learn through hands-on experience (Concrete Experience) and those who learn through careful watching (Reflective Observation).

CE – Concrete Experience
(The 'Doer')



Needs Order and Demonstrations

They prefer step-by-step explanations and seeing a demonstration before trying it themselves.

RO – Reflective Observation
(The 'Watcher')

Thrives in Unstructured Environments

They prefer highly active environments with plenty to observe and time for group discussion.

COMPARISON MATRIX

Method Type	Concrete Experience (CE)	Reflective Observation (RO)
Best Environment	Quiet, ordered, and practical	Active, social, and observant
Best Tools	Internships and demonstrations	Lectures and group discussions
Common Challenge	Frustrated by vague instructions	Needs to force systematic reading
