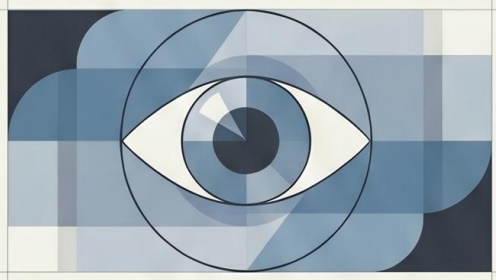
THE THINKER VS. THE OBSERVER: RO & AC LEARNING STYLES

Based on Kolb's learning model, this infographic explores Reflective Observation and Abstract Conceptualization, detailing how 'Observers' and 'Thinkers' process information through objective watching or logical analysis.

RO - THE REFLECTIVE OBSERVER



OBSERVE BEFORE ACTING

Prefers to be an objective observer, watching carefully before taking any action.

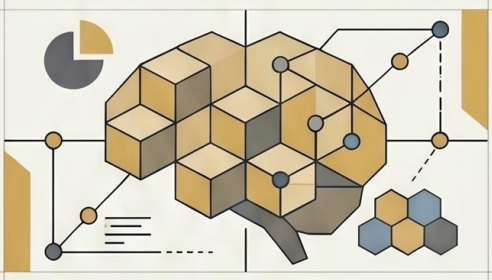
LEARNING BY RIDING ALONG

Imagine learning to drive by simply being an observant passenger in a car.

PROCESS VIA DISCUSSION

Best refined by talking with colleagues or instructors after attending seminars.

AC - THE ABSTRACT CONCEPTUALIST



DRIVEN BY LOGIC

Uses analytical thought models and logic to understand symbols, pictures, and words.

THEORETICAL TEACHING

Imagine learning to drive by studying the theory and mechanics in a classroom.

THRIVES ON RESEARCH

Prefers content-rich programs, textbooks, and studying in quiet environments like libraries.

QUICK-GLANCE COMPARISON: LEARNING PREFERENCES

	REFLECTIVE OBSERVATION (RO)	ABSTRACT CONCEPTUALIZATION (AC)
BEST METHOD	Group discussions and visual aids	Books, handbooks, and homework
ENVIRONMENT	Active with lots to observe	Structured, content-rich, and logical
KEY STRENGTH	Objective observation	Analytical and symbolic thinking
