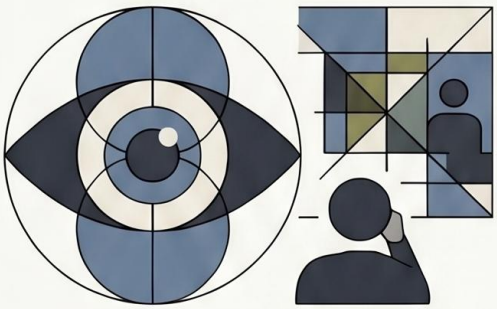
WATCHING vs. DOING:

UNDERSTANDING RO AND AE LEARNING STYLES

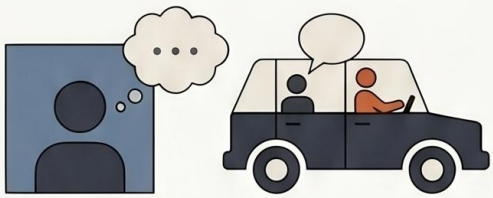
Based on David A. Kolb's learning model, individuals have preferred methods for acquiring knowledge. This infographic contrasts the "Reflective Observer," who leams by watching, with the "Active Experimentalist," who leams by doing.

RO – REFLECTIVE OBSERVATION (The Observer)



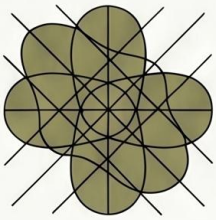
OBSERVE BEFORE ACTING

You prefer to assume the role of an unblased, objective observer before taking action.



THE PASSENGER SEAT APPROACH

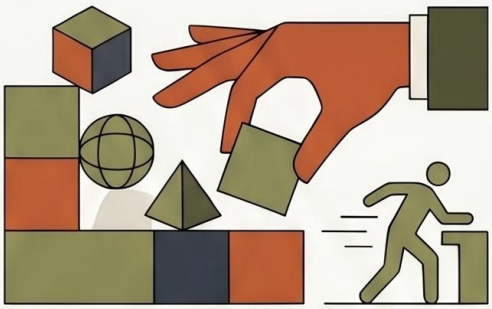
Like learning to drive by riding along and watching the driver's every move.



PREFERS UNSTRUCTURED LEARNING

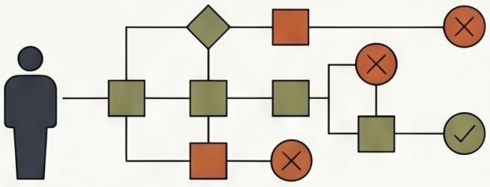
You thrive in active environments where there is plenty to see and organize yourself.

AE – ACTIVE EXPERIMENTATION (The Doer)



REAL LEARNING BY DOING

You seek your own solutions and love practical application over theoretical study.

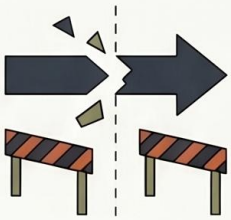


THE TRIAL-AND-ERROR APPROACH

Like learning to drive by getting behind the wheel alone in an open field.

NO FEAR OF FAILURE

You prefer specific tasks and problem-solving exercises rather than being "spoon-fed" information.



FEATURE	RO (Reflective Observation)	AE (Active Experimentation)
MAIN ACTION	Watching and Thinking	Trying and Doing
IDEAL METHOD	Discussions and Visual Aids	Games and Case Studies
PHILOSOPHY	Objective Observation	Trial and Error
